IMMUNIZATION

1. 8 plus 11 months = 19 months for MMR
2. Vaccines to be given: DPT,IPV, Hep B,Hib, PCV
Too late for rotavirus
3. Administer MMR to to 8 month old and may include third dose of PCV
Administer second dose of MMR for the 2 year old
4. Allay fears of the autism scare: debunked
Family history of seizures is not a contraindication
Administer MMR
5. Administer meningococcal vaccine
Asplenic individuals are at high risk for infection with encapsulated bacteria
6. A
7. Yes In persons living with immunocompromised individuals,close contact between the patient and the OPV recipient should be minimized for approximately 4- 6 weeks after immunization
Minimize exposure to excreted poliovirus vaccine
Hand hygiene
8. Immunocompetent individuals living with a immunocompromised patients may receive all inactivated vaccines as recommended for all adults and children (annual CDC)

Live vaccines: MMR, Varicella, rotavirus (2-7 months old), Zoster, yellow fever , oral typhoid

9. Do a PPD on the baby
Work up baby for TB... history of close contact warrants this
10. Give Hepatitis B and HBIG upon delivery.
Baby is premature and less than 2 grams.
Hepatitis B dose is not counted in the primary series . Additional 3 doses of hepatitis B is needed.
Work up baby for TB... history of close contact warrants this
