Summary Statement

- 1.1. In pursuit of a resilient and secured network access of the hospital, PCMC will be needing a User and Network Behavior monitoring and management system.
- 1.2. The Philippine Children's Medical Center, is issuing this Terms of Reference (TOR) as part of the Bidding Documents for the undertaking on SECURE WEB GATEWAY PLATFORM. This TOR contains the functional requirements identified by the Management of Information Systems Division (MISD), based on network requirements by the hospital offices.
- 1.3. The model that MISD is considering is a new Secure Web Gateway as a platform user and Network Behavior Monitoring and Management that will comply with the terms of reference requirements set by the Agency.
- 1.4. The scope of this undertaking is to analyze, secure and manage user and devices' network access of Philippine Children's Medical Center via one management platform for three (3) year.

The PCMC intends to award a single contract to the Contractor that best meets the requirements.

Background Information

Rationale

The Philippine Children's Medical Center, through MISD, has been providing internet services and network access to the hospital. Online government applications, portal, and website transactions, that the hospital uses, are vital to the operations of the agency.

Lack of bandwidth management and the absence of a user and network monitoring platform are the issues that PCMC faced and we are addressing this issue by proposing this solution.

When the pandemic hit the country and most of the transactions went online, PCMC experienced a significant number of in-flux of internet usage. Tele-conferencing along with other online applications, the mode of choice for non-face to face transaction, is where the bulk of the internet bandwidth is allotted to. There would be times that we are currently experiencing lag (slow transactions via the internet) on the network. We were not able to see and control the network traffic of the users accessing the hospital's network as well.

A secure web gateway will provide a platform to address the ongoing network problems. The need of a management platform to monitor, analyze and manage the user and network behavior. This will ensure that the PCMC Network would be stable, secure, and resilient.

Expected Output

Outputs

The Philippine Children's Medical Center, will be expecting the following

- Faster and controlled browsing of the Internet
- Secured Internet Access of the users and devices within the hospital network
- Volume transactions to TELECONFERENCING (TELE-MED, ZOOM, online Training and Conferences, et al.), PHILHEALTH, GSIS, e-CLAIMS, DOH web applications will be accommodated and response time will be prioritized for a much faster and secured transactions.
- Complementing the firewall when blocking malicious websites and applications accessed by users and endpoints
- Internet access of employees and guests within the hospital will be monitored and managed 24x7
- 24x7 technical support
